(C) a mixed resin comprising 35 to 55% by weight of a polypropylene having a density of 0.900 to 0.930 g/cm<sup>3</sup>, 40 to 60% by weight of an ethylene · α-olefin elastomer having a density of 0.860 to 0.900 g/cm<sup>3</sup> and 2 to 8% by weight of a high-density polyethylene having a density of 0.955 to 0.970 g/cm<sup>3</sup>;

a third layer is made of:

the ethylene · α-olefin copolymer (A); or

(D) a mixed resin comprising 40 to 60% by weight of a polypropylene having a density of 0.900 to 0.930 g/cm<sup>3</sup> and 40 to 60% by weight of an ethylene · α-olefin elastomer having a density of 0.860 to 0.900 g/cm<sup>3</sup>; and

a fourth layer is made of the mixed resin (C).

B2✓

7. (Twice Amended) A container comprising the multilayered film according to claim 1, which container has the first layer of the multilayered film as an outer layer and the fifth layer as an inner layer.

#### REMARKS

In response to the above Office Action claim 1 has been amended to use more traditional U.S. claim language and claim 7 to correct a typographical error. No amendments have been made in view of the cited prior art.

The present invention as set forth in claim 1 relates to a multilayered film having five layers in which, in essence

a first layer is made of an ethylene · α-olefin copolymer having a density of 0.930 to 0.950 g/cm<sup>3</sup>;

a second layer is made of:
